

## Company Profile

*We provide the best solutions for Production, Service and Technology following the slogan 'With Innovation into the Future'.*

After separating from one of the world's largest technology companies, the team founded its own business in September 07. Our main goal is innovative transfer of technology and knowledge within the areas Data Analysis, Database and Software Engineering, RFID (Radio Frequency IDentification) and Systems Integration. In addition to consulting and project accompanying service we develop products for RFID, Service & Support and Business Intelligence. Our customers benefit from more than 50 man-years of expert knowledge gained in many international projects done on behalf of Toshiba Regensburg. While being responsible for project management, development and maintenance in the areas Production and Service & Support, the team was in charge of a good portion of Toshiba's IT systems.

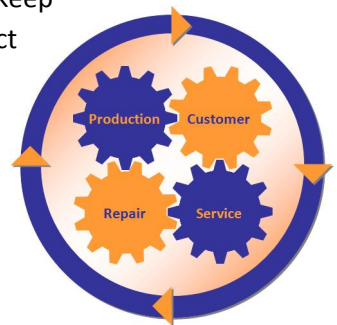

# Service & Consulting

*To collect and to interpret data correctly is fundamental in order to maintain modern business - customized and functional IT is essential for that.*

**Database design**, architecture and performance are substantial in order to get the information you need in time.

**Software Engineering** and modern concepts keep systems flexible and adaptable to collect important data.

**RFID Integration** saves a huge amount of time in data acquisition - automatic bulk reading instead of scanning countless barcodes during production, packing, warehousing, shipment, service, repair ...

**Business Intelligence** (BI) makes analysing of huge masses of information possible and fairly easy. It should be a base for operative, tactical and strategic decisions - the main reason for collecting data. BI boosts your business one evolutionary step beyond data hunter-gatherer.

**Our vision** is to connect all those single processes found in a normal producing company to interact smoothly for the profit of each one of them.

# References

*An overview about systems designed and managed by initPRO.*

## **Weblord**

Manages, analyses and does the accounting the complete notebook service and repair process of Toshiba and its hundreds of repair partners in EMEA.

**TOSHIBA**  
Leading Innovation >>>

## **Component Repair**

Manages the repair process of defect components of external and internal repair partners and provides quality reporting for the management.

## **Production**

Production control, data acquisition and management reporting of Toshiba's notebook production.

## **RFID**

Integration of RFID technology into production process and data acquisition.

## **Repair Process Controlling**

The system handles all repair process requirements for different electronic devices of different manufacturers.
